

## **Our Fixing Film Assembly Rebuild program for Canon\* offers great value**

MINNEAPOLIS, MN (Nov. 17, 2016) – NA Trading and Technology, a distributor of OEM-compatible high-performance copier parts and supplies since 1983, is proud to offer the Fixing Film Assembly Rebuild Program for Canon.

Our program works just like Canon's: Customers send us their gently used Canon FM3-5950-010 Fixing Film Assemblies with a purchase order for the returned quantity. We rebuild them and return them to the customer at considerable savings. Because we must discard damaged units, it's best to ship them to us in their original packaging, taking special care that the wiring harness connectors are securely attached to the heat element and secured in the end blocks.

The FM3-5950-010 works in these popular ImageRUNNER Advance Color machines: IRAC5030, IRAC5035, IRAC5045, IRAC5051, IRAC5235, IRAC5240, IRAC5250, IRAC5255.

The Fixing Film Assembly Rebuild Program is available exclusively to customers who send us cores in advance. It's a great way to maintain technician efficiency and improve service profitability. Contact your product specialist to learn how you could save with the Fixing Film Assembly Rebuild Program from NA Trading and Technology.
