

## **Transfer Unit Rebuild Program for Konica is an exclusive opportunity to save**

MINNEAPOLIS, MN (May 31, 2017) – NA Trading and Technology, a distributor of high-performance compatible copier parts and supplies, is pleased to bring you a first of its kind program to save money on parts you need: our Transfer Unit Rebuild Program for Konica.

For the first time, we can restore your worn Konica transfer units to their original quality. This is a win-win-win program: You'll reduce electronic waste by prolonging the life of these parts, plus you'll save money on a part that works just like a brand new unit while supporting American manufacturing.

Depending on your machine, the transfer unit will have either three or four components: the transfer belt assembly, the transfer roller, the ozone filter and/or the toner filter. Carefully package each piece and send them all to us. We'll restore the unit to like-new condition and send it back. You get big savings on a product that yields OEM-level quality.

This is not an exchange, so you won't get a beat-up unit in place of your gently used unit. Customers will be able to buy back any transfer unit our team of highly skilled remanufacturing specialists can rebuild. This program is only available to customers who send a purchase order with their used A0EDR71644, A161R71322 or A61DR70000 transfer units in advance.

The three transfer units we are currently rebuilding work in the following machines: BHC220, BHC280, BHC360, BHC224(e), BHC284(e), BHC364(e), BHC454(e), BHC554(e), BH224(e), BH284(e), BH364(e), BH454(e) and BH554(e).
